Faisalabad, Pakistan

SUMMARY

Third-year B.S. Artificial Intelligence student with hands-on Python and SQL expertise in building NLP pipelines, integrating LLM APIs, and applying **Prompt Engineering** and **RAG** patterns. Practical experience with **LangChain**, **Deep Learning**, **Transformers**, and **Generative AI** workflows. Actively seeking an ML/AI internship to contribute to model development, **Fine-tuning**, and production AI systems.

EDUCATION

B.S. Artificial Intelligence — National Textile University, Faisalabad | GPA: 3.72 / 4.0 | 2023 – Present

Relevant Coursework: Machine Learning, Deep Learning, NLP, Data Structures & Algorithms, Python, Statistics, Linear Algebra, OOP

PROJECTS

VoiceGuard — Python · Deep Learning · PyTorch · Computer Vision · Feature Engineering · NumPy · Pandas · ONNX

- Engineered a **Python** audio-classification pipeline processing **25,380 samples** using **NumPy** and **Pandas** for **Feature Engineering**; resolved a 9:1 class imbalance via JSON-structured metadata analysis, lifting model accuracy by **18%** [estimate, verify].
- Optimised **Deep Learning** inference throughput **6.7×** by profiling and refactoring bottlenecks in a **PyTorch** pipeline and exporting the final model to **ONNX** format for portable deployment.
- Validated model output across **71,237 evaluation samples** through systematic debugging cycles — applying data-quality checks consistent with **MLflow**-style experiment tracking to ensure release-ready accuracy.

LangChain Conversational Chatbot — Python · LangChain · LangGraph · LLMs · Prompt Engineering · RAG · Hugging Face · Transformers · Vector Databases

- Built a multi-turn Q&A chatbot using **LangChain** and **LangGraph** agentic orchestration, integrating a **Transformer**-based **LLM** with a **Vector Database** backend for **RAG**-powered retrieval, reducing hallucination rate by **~30%** [estimate, verify].
- Designed and iterated **14+ Prompt Engineering** templates — role instructions, few-shot examples, and chain-of-thought patterns — benchmarked with **Weights & Biases** to track structured-output consistency across **Generative AI** responses.
- Deployed a live web interface for real-time LLM I/O testing via a **CI/CD** pipeline, accelerating iterative **Fine-tuning** of prompts and cutting prompt-iteration cycles by **40%** [estimate, verify].

TheLetters ↗ — React · TypeScript · Node.js · SQL · REST API · CI/CD

- Built a full-stack web app backed by a Node.js/Express REST API handling JSON payloads; integrated SQL-backed authentication with a NoSQL fallback layer achieving 99%+ data consistency under simulated outage conditions.
- Automated deployment via a CI/CD pipeline (GitHub Actions + Vercel), reducing release time from manual pushes to sub-5-minute automated builds.

DormMate — TypeScript · Node.js · SQL (Supabase) · REST API · OOP

- Architected a SQL-backed REST API with 3 OOP-modular services (expense tracking, budgeting, study-partner matching); wrote complex aggregation queries that cut report-generation time by 60% [estimate, verify] versus application-layer computation.

TECHNICAL SKILLS

Languages: Python, SQL, C++, JavaScript, TypeScript, HTML/CSS, C#

AI / ML Frameworks: PyTorch, TensorFlow, Scikit-learn, Hugging Face Transformers, LangChain, LangGraph, ONNX

Generative AI & LLMs: LLM API integration, Prompt Engineering, RAG, Fine-tuning, Generative AI, Quantization, Vector Databases

Data Science: NumPy, Pandas, Feature Engineering, Deep Learning, NLP, Computer Vision, Weights & Biases, MLflow

Data & Databases: SQL (Supabase, SQLite, MySQL), NoSQL (Firestore), data annotation, REST APIs, JSON schema design

Web & DevOps: React, Node.js, Express.js, Flask/Django (familiar), Git, GitHub, CI/CD, Vercel, OOP, Agile/Scrum
